L35 ANSWER 34 OF 34 BIOSIS COPYRIGHT 1997 BIOSIS
 AB We present a new method for rapid **purification** to near

homogeneity of sequence specific **DNA** binding proteins based on magnetic separation. The method is described for the **purification** of the yeast transcription factor .tau..

DNA affinity **Dynabeads** (monodisperse superparamagnetic particles) specifically bind the protein in the presence of competitor **DNA**. By magnetic separation, wash and elution, highly enriched transcription factor preparations are obtained within minutes. In less than an hour with three cycles of adsorption, nearly homogeneous factor .tau. was obtained. The factor preparation contained mainly two polypeptides of 100 and 140 kDa and was fully active in transcription and **DNA** binding assays.

This procedure should work for any high-affinity sequence-specific **DNA** binding protein only minor modifications.
